

Shish-Kebobs, an Armenian tradition, have long been a favorite in our family and enjoyed at gatherings throughout the year. We invite you to share with us this easy-to-prepare meal inside or outside.

Ingredients:

1 leg of lamb, cut into 1 1/2 inch squares (no gristle or fat)
2 onions, sliced
Juice of 3 lemons
3/4 cup of olive oil
1/4 cup of red vinegar
Tomatoes, green and/or red peppers, onions
Salt & pepper, cayenne, paprika, coriander, cumin
Crushed mint (optional)

Preparation:

Mix the meat with onions lengthwise and marinate with the lemon juice, olive oil and vinegar. Add spices. Let stand overnight (or for at least a few hours). Put the meat on skewers and flame broil over charcoal fire, on gas grill, or under broiler. Char-broil tomatoes, peppers and onions on separate skewers. Serve with Rice Pilaf for a delicious Armenian dinner.

**If you see a white haze on the surface of your pavers...
On new installations, primary efflorescence may occur. At some point following your installation, secondary efflorescence can appear.**

Efflorescence may appear on pavers and all Portland Cement-based products. In no way does it affect the structural integrity of your pavingstones. It will wash or wear off over time. Immediate cleaning and removal of efflorescence can be achieved with Paver Cleaner, a solution available from a Cambridge Distributor. Follow instructions provided by the manufacturer.

A few words about sealing your pavers...

If a non-slip sheen is desired on your pavingstones, you can seal them after 12 months of your installation date with Paver Sealer, also available from Cambridge. Before sealing, clean the pavers with Paver Cleaner.

You can find Paver Cleaner and Paver Sealer at your Authorized Cambridge Distributor or through your professional pavingstone contractor. To locate the nearest distributor, visit www.cambridgepavers.com.

Did you select Cambridge Pavingstones in a blended color?

Cambridge Blends are combinations of select Cambridge Solid Colors mixed in unequal amounts for an appearance that's truly unique to each pavingstone and as a result, every installation. Since this is a random process, blends are different on every Cambridge pavingstone and one color may predominate the other.

*Along with our network of
Authorized Cambridge Distributors,
all of us here at Cambridge Center
are proud to provide you with our
outdoor living products for
a lifetime of satisfaction.*

For Choosing...*

THE BEST OUTDOOR LIVING IDEAS COME FROM CAMBRIDGE

Removal Of Spills And Stains

- **Citronella wax** – Lay a white towel over spilled wax and run a hot iron over it. Wax will lift off onto towel.
- **Asphalt and emulsified asphalt** – Chill with ice (if warm outside), scrape away and scrub the surface with scouring or abrasive powder. Rinse thoroughly with water.
- **Ketchup, mustard, grease drippings from food and candy** – For stubborn stains, apply liquid detergent full strength and allow it to penetrate for 20 to 30 minutes. Scrub and rinse with hot water. Removal is easier if these stains are treated immediately.
- **Leaf, wood rot, or tobacco stains** – Apply household detergent and scrub with a stiff bristled brush. You can also use Simple Green, a non-toxic cleaner-degreaser. These products are available in most supermarkets. Note: leaf stains that normally occur in autumn will dissipate over time.
- **Mortar** – Let harden. Carefully remove spots with a trowel, putty knife or chisel.
- **Oil or grease that has penetrated** – Mop up any excess oil with rags. Cover the area with oil absorbent kitty litter, talc, fuller's earth, or diatomaceous earth. Leave it on the stain for a day and then sweep up.
- **Paint** – Fresh paint should be mopped up immediately with rags or paper towels by blotting. Do not wipe as this will spread the paint and extend removal time. If the paint is latex and water-based, soak and then scrub the area with hot water, scouring powder and a stiff brush until no more improvement is seen. Scrape away excess. Apply commercial paint remover. Let sit for 20-30 minutes. Gently scrub. Blot up (do not rub in).

- **Tire skid marks** – Scrub black area with water, detergent and scouring powder. In the case of small stained areas, removal and replacement of marred pavingstones with new pavers is also an option.
- **Armor All® stains (a silicone-based, tire and wheel care product)** — To remove stains, mix 5 parts of hot water, 1 part ammonia and 1 part lemon dish detergent. Using one or more applications of the solution, scrub with a stiff bristle brush.
- **Rust** – Apply household dish detergent or Destainer from a Cambridge Distributor.

Notes: 1. As with concrete pavers, staining can also occur on poured and stamped concrete and clay brick. 2. Using bleach or general-purpose masonry muriatic acid to clean pavers will result in discoloration of pavers.

Preventing Ant Mining And Reducing Potential For Weed Growth In Joints

Apply BP Pro Joint Stabilizing Sealer or Sweep Alliance Polymeric Sand from Cambridge into joints between pavers. Follow manufacturer's instructions to activate the formula. An herbicide can also be used to control weeds.

Snow Removal And De-Icing

Cambridge Pavingstones are not affected by de-icing salts. A rubber-tipped plow is recommended when removing snow from your pavement.

For more assistance, call your professional contractor who will contact his Authorized Cambridge Distributor. To find the nearest distributor, visit www.cambridgepavers.com

More information can also be found in the Homeowner Resources Center on the Cambridge Web site.

Cambridge disclaims any and all responsibility for the application of this information. The user is advised to use cleaners specifically made to remove stains that commonly occur on concrete pavers. They will likely be more effective.
