After an amazing vacation a lot of homeowners are overcome with that old familiar feeling of not wanting to return to “normal” everyday life. Where are the never ending water features and outdoor bars? Where are the accommodating staff members asking if they can be of any service, and replying with “my pleasure” in return? Reality sets in and the water features become a washing machine and shower, the refrigerator becomes the closest thing to a “wet bar,” and your family’s responses to your needs are generally less than accommodating. Vacation is over, and so are the lazy days filled with rest and relaxation.

It is back to business as usual. Weekdays that seem to drag on and weekends that seem to be over in the blink of an eye. Gone are the easy breezy feelings that come along with vacation. You and your family long for those days, and wonder if it is possible to recreate those feelings again without having to get on a plane or rent a hotel room.

This is when the wheels start turning in your head. How can I create a resort like feeling in my own backyard? Over the years you may have visited friends’ homes and admired backyards full of pavers, fire pits, and even outdoor kitchens and bars. This is when you think to yourself, why can’t I create a space I would never want to leave, and would look forward to coming home to all year round?

Well, you can with Cambridge Pavers with ArmorTec®! Visit us online today to find an authorized distributor near you. Here you can begin your journey by looking at all of the colors, sizes, textures, and products we offer. Next, you can meet with a contractor who will be able to help your vision come to life and can even show you digital designs based on your current backyard space.

Even if you cannot execute the whole project all at once, just know that in time and with proper planning you will accomplish your end goal. Your contractor can work with you in phases that will accommodate your budget, which will make the whole process seem way less overwhelming.

Therefore, my advice to anyone who is looking to extend their living space beyond their four walls is to visit Cambridge Pavers’ website. This is the first step in creating the perfect stay-cation in your very own backyard.

Thank you for considering Cambridge,

Charles H. Gamarekian
Founder / Chairman / CEO, Cambridge Pavers Inc.
CREATE YOUR **PERFECT PATIO** IN PHASES OVER TIME!

Outdoor Lifestyling™ with Cambridge Hardscape and Outdoor Living Products can create beautiful, wide open spaces and unique enclaves for family and guests who appreciate four-season enjoyment just footsteps from their back door.

10 MUST DO THINGS
THIS SUMMER

Summer is coming and so is the warmer weather. Get ready to soak up the sun’s rays & longer days. ’Tis the season for outdoor concerts, al fresco dining, frozen cocktails or mocktails, and driving with the windows down and the volume up. Here are a few things we suggest adding to your summer “play” list this year!

1. DO SOME HOUSE WORK
Working outdoors is a lot easier when the weather is warmer. Now is the time to clean out those gutters and check for any missing shingles or roof damage that may have occurred over the winter. Cleaning the windows and power washing your siding will give your home an instant makeover.

2. FIND YOUR NEAREST BODY OF WATER
This could be a lake, ocean, pool, river, or even a water park! Water aerobics is an easy way to get your cardio in without breaking a sweat. Chillax in a tube or on a float and let the water do all the heavy lifting for once. Not a swimmer? Not a problem. Just sitting near a body of water can prove to be relaxing with its hypnotic movement and soothing sounds.

3. GO ON VACATION
Whether it involves sun and sand or adventure and exploration now is the time to get after it! Summer is the season to have fun and try to recapture a little of those carefree days of your youth. Say goodbye to the daily grind and responsibilities, if only for a couple of days. Think of this as a reset button, so you can return to your regularly scheduled program renewed and refreshed!

4. HAVE A BARBEQUE
Fire up the grill and invite family and friends over for an outdoor feast! Keep it simple with hamburgers and hot dogs, or go gourmet with spare ribs, chicken, and sausage. Veggie burgers and cowboy caviar are two great options to offer your nonmeat eating guests. Make it easy on yourself and ask attendees to bring their favorite side or drink!

5. PLAN A PICNIC
These days if you type in the words “picnic basket” you will be amazed at what populates on the page. With a plethora of sizes, colors, and options like built in utensils and glassware you are bound to find one that suits your al fresco needs. Taking time out of your busy day to enjoy a meal with Mother Nature is an easy way to halt the hustle and bustle of everyday life if only for an hour. Bon appetit!

6. PLANK YOURSELF TO GOOD POSTURE
Planking is a full body workout and there is absolutely no equipment needed! Make sure you are executing proper positioning to avoid joint stress or injury. Once you master the form you can slowly add on to the amount of seconds you hold this position. Try to work up to 60 seconds three times a day for maximum benefits.

7. START A GARDEN
It does not get any fresher than picking produce from your own backyard. Organic fruits and vegetables can be costly. Imagine preparing meals with ingredients that you have grown, like marinara sauce with your own tomatoes and basil. How about grilling up some summer squash or bell peppers with a side of spinach salad that all came courtesy of your garden.

8. TRY SOMETHING NEW
Even though the New Year might technically take place in January, June was the New Year of your school days. Summer was the unofficial season of fun! Get back in touch with that part of yourself and start checking things off your bucket list this year. 90 days is a lot of time to tackle things you have put off doing in the past, so get out there and make it happen!

9. UNPLUG & CONNECT IN PERSON
Connecting with family and friends on social media or through text has become an everyday occurrence. Although these are both easy and convenient ways to stay in touch there is nothing better than the real deal. Make sure you put down the phone when you are with others so you can be present and in the moment, and never minimize the importance of conversations and eye contact. “Liking” your interactions with people instead of liking a picture is a powerful and important part of life.

10. WALK MORE
Try to hit at least 10,000 steps a day. Take advantage of the weather and get those legs moving. Parking further away from a store entrance, taking the stairs instead of an elevator, and getting out for a stroll before or after dinner can make a big difference. If you are lucky enough to visit a beach be sure to take a nice walk along the shoreline. You will hit your goal before you know it while simultaneously enjoying the sand between your toes.
After many years of outstanding performance and beauty, Cambridge Pavingstones with ArmorTec® remain recognizably smooth and dense with rich color. The sustainable benefits are a result of a proven formula used in manufacturing ArmorTec® – only environmentally friendly raw materials, super fine sand granules, and cement of the highest quality.

Without ArmorTec®, the Pavingstone will look less attractive as the sand and cement wear over time. This detracts from the appearance of the surface and contributes further to their worn look.

*Shown is a Cambridge Pavingstone intentionally manufactured without ArmorTec® installed in 2006.

Choosing A Color...

**WHAT ARE CAMBRIDGE BLENDS?**
Cambridge makes available one of the most comprehensive selections of solid and blended colors in the market. The blended colors shown are combinations of two or three solid colors selected by the Cambridge color lab. They are mixed in unequal amounts for an outcome that is truly unique to each pavingstone, and as a result, to every installation as well. Since this is a random process, Cambridge Blends are different in every cube of pavers. Therefore, one color may predominate the other. Cambridge Pavingstones are made from natural, environmentally-friendly material, therefore, variations in color may occur.

**ACHIEVING THE BEST COLOR DISPERSION**
When spreading Cambridge Pavingstones, solid or blended colors over a wide area, remove units by the band, from top to bottom and use multiple cubes of pavers to achieve optimum results.

**MAKING AN ACCURATE SELECTION**
Final selections should be made from samples obtained from an Authorized Cambridge Distributor or professional pavingstones and wallstones contractor.

Need inspiration for your next outdoor project? Follow us on social media!
Are you looking for unique, one-of-a-kind pavingstone colors? Well the search is over! The South Beach Collection brings soft, pastel shades that are as lively as Ocean Drive. All of our pavers are available in South Beach colors through special order only (minimum order required).
### COLOR TIERS

#### STANDARD COLORS
- Brandywine, Birchwood, Chestnut, Cottonwood, Ironwood, Onyx, Ruby, Sahara, Salmon, Chestnut/Bronze, Chestnut/Salmon, New England Blend, Onyx/Chestnut, Onyx/Natural, Ruby/Onyx, Sahara/Chestnut, Salmon/Onyx, Toffee/Onyx, Toffee/Onyx Lite, Toffee/Onyx Mauve

#### COLOR PLUS
- Coal, Mocha, Canyon Blend, Desert Beige, Limestone Quarry Blend, Redrock Blend, Riverbed Blend, Sahara/Chestnut Lite, Sandstone Blend, Sandstone Lite, Slate

#### PREMIER COLORS
- Blue Lagoon, Bluestone Blend, Driftwood, Eggshell, Limestone Quarry Blue, Montauk Blue, Oceanside, Shell, Stone Harbor, Vermont Slate

### NEED A PROFESSIONAL INSTALLER? LET US HELP!

You are about to make an important investment in your home, so invest the time it takes to find the right person for the job.

**Visit us @ Cambridgepavers.com and click on the Homeowner Tab.**

After filling out the form, one of our sales specialists will provide your information to professional installers in your area. Please make sure you do your homework. These professional installers are not employees of Cambridge. Please complete the following steps:

- Please view ICPI's Consumer Guide brochure - a great resource guide to interlocking concrete pavers, which offers a contractor comparison checklist
- Also go to our links located in our homeowner guide section "Knowing the Contractor" and "Knowing when the Installation is Being Done Right"
- Be sure the contractor visits your home before providing the proposal
- Ask for references and visit past projects the contractor has completed

Please allow 3 business days for a professional installer to contact you.

### 100% NATURAL & SUSTAINABLE

It's easy to “go green” with Cambridge at your side. Our interlocking concrete pavement systems with ArmorTec® and Wall Systems are earth-friendly, totally sustainable, recyclable and provide many environmental, social and economic benefits immediately and over their entire life cycles.

Unlike many of today’s consumer products, environmental concerns are an integral part of the Cambridge brand. You won’t have to take a hike in the mountains to be in harmony with nature — just step outside your home where you will have created your own maintenance-free “green scene.” Turn to a professional contractor who can present viable, solutions-based options specific to your property.
**The CAMBRIDGE FULLY-TRANSFERABLE LIMITED LIFETIME WARRANTY**

**Cambridge Pavers Inc. warrants to the owner that, should a Cambridge pavingstone or wallstone, installed according to ICPI installation guidelines, prove defective, it will be replaced without cost.**

Replacement labor is not included. **THIS WARRANTY IS TRANSFERABLE WITH VALID PROOF OF PURCHASE.**

Cambridge Pavers like any other concrete products and or natural stone will not resist staining and or environmental debris build up. Anything outdoors whether man-made or natural will suffer Mother Nature’s wrath when exposed to the elements 24/7, 365 days a year. Therefore, if you want to keep your pavers looking good it will entail some maintenance on your part. This could mean an easy clean with dish soap and water or something more substantial depending on the type of stain. We cover all the ways to care for your pavers if you do come across a stubborn stain on page 120.

**NOTE:** Efflorescence, a whitish powder-like deposit that sometimes appears on concrete products, in no way affects the structural integrity of the pavingstones or wallstones and will wash and wear off over time. The use of concrete setting beds may also increase the possible occurrence of efflorescence. Because this is a natural occurrence, Cambridge Pavers, Inc. accepts no responsibility or liability for this condition. Cambridge Pavingstones are made from natural, environmentally-friendly materials, and therefore, variations in color may occur.

Polymeric haze from the use of polymeric joint sand may appear on your concrete products if the sand was not removed from the surface of the paver properly. This does not affect the integrity of the product or your installation. The hazing will wash away naturally with time and rain or it can be removed with a specialized cleaner. You are advised to contact your contractor. Cambridge Pavers, Inc. accepts no responsibility or liability for this occurrence.

**NOTE:** Cambridge Pavers, Inc. is offering the Alliance Gator Base product based on customer requests. The use of this product is not covered under ICPI guidelines or Cambridge’s warranty. All warranty claims will be forwarded directly to Alliance.

**NOTE:** Custom colors as well as pavers with Blue and Shell pigments do not have color throughout. Cambridge Wallstones are made without ArmorTec.

**SNOW REMOVAL** equipment should have the proper rubber blade guards to protect the surface of the pavers. Cambridge Pavers is not responsible for any damage caused by snow removal equipment, which may leave burns and scuff marks on pavers.

**IMPORTANT NOTICE:** A bolt-on urethane protection mat must be attached to the plate compactor as a precaution against surface scuffing on all Cambridge textured products. Installation guidelines must follow those as instructed by the Interlocking Concrete Pavement Institute (ICPI).

In order to make a claim under this Warranty, the owner must return the defective pavingstone or wallstone to the dealer who sold the product. Any implied warranties of merchantability and/or fitness for a particular purpose are limited as stated above. The exclusive remedy under this Warranty is replacement of a defective pavingstone or wallstone. Cambridge Pavers Inc. shall not be liable for incidental or consequential damage arising from any breach of warranty. Some states do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of incidental or consequential damages, so the above limitations may not apply to you. Any court action making a claim under this Warranty must be commenced within one year of the date on which the defect was, or in the exercise of reasonable care, could have been discovered. This Warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Cambridge adheres to ASTM Designation C 936-82 standards as found on our website. Vehicular applications should be accommodated through pavingstones with an aspect ratio of 3:1 or less. Units with an overall length to thickness aspect ratio of 4:1 or greater should not be used in vehicular applications (ICPI Technical Specification 10). An example of a Cambridge product not suitable for vehicular applications is the Ledgestone XL which has an aspect ratio greater than 4:1, this product should only be used in pedestrian applications (sidewalks, patios, walkways, etc.).

**CAST STONE PRODUCTS WARRANTY:** Cambridge Pavers, Inc. warrants to the original purchaser (with a proof of purchase) that should Cast Stone products (Steps, Caps & Stepstones) installed according to industry standards and in compliance with our installation guidelines, prove defective, they will be replaced without cost. Replacement labor is not included. This Warranty is good for as long as the original owner/property owner (homeowner) owns the property on which the Cast Stone was installed. Cambridge Pavers Inc. shall not be liable for incidental or consequential damage arising from any breach of warranty. Some states do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of incidental or consequential damages, so the above limitations may not apply to you. Any court action making a claim under this Warranty must be commenced within one year of the date on which the defect was, or in the exercise of reasonable care, could have been discovered. This Warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

**Cambridge Pavers does not offer a warranty on any of our Natural Stone products including Outdoor Porcelain Tiles.** Natural stones may also have pyrite (rust) in the stones which can occur in all natural products. Cambridge Pavers Inc. has partnered with quarries from around the world to offer Natural Stone products. Unlike manufactured stone, Natural Stone will vary in terms of color, pattern and texture, because these are products of nature and not manmade. There are no two pieces alike when it comes to Natural Stone, that is what makes these products beautiful and unique. Natural Stone products delivered to your home may not be an exact product match to what you might have seen in a show room or in our brochure.

Natural Stone products can last a lifetime, but if you want to keep them looking like they did when first installed some general maintenance is necessary. Natural Stone products can stain and become scratched, because they contain naturally porous surfaces. To avoid staining from occurring keep surfaces clear of dirt, damp leaves, acidic products, and oils, if any of these things do come in contact with your Natural Stone remove them as soon as possible by cleaning them with soap and water. If this method does not work Natural Stone cleaning products can be found in your local building material store, but be sure to avoid any cleaners containing acids.

Sealing Natural Stone comes to personal preference. Some people feel unsealed stones get better looking with age, while others feel sealing their stones aids in easier clean up and less maintenance, although this is not a guarantee. If you choose to seal your stones always do a test patch in a spot that is not very noticeable to ensure you are happy with the end result.

---

**HOW TO INSTALL YOUR CAMBRIDGE PAVINGSTONES SYSTEM**

**Step 1** Preparation: Sketch a diagram of area to be paved. Square it’s 90° corner. Set borders for outside perimeter 8” away from area. Establish finished height and slope by setting leveled string lines. Allow 1” drop every 8’ at sides for water runoff.

**Step 2** Excavation: Excavate (1 1/2” for patios and walkways) / 2” (for driveways). Install PVC restraints to prevent spreading.

**Step 3** Leveling Course: Add 1” of coarse C-33 sand into bottom of trench. String lines. Allow 1” drop every 8’ at sides for water runoff.

**Step 4** Additional Courses: Stack staggered wall units on top, stepping each new row back approximately 3/4”. In this type of gravity wall installation, weight and set back of the units provide

---

**HOW TO INSTALL YOUR CAMBRIDGE SEGMENTAL RETAINING WALL SYSTEM**

**Step 1** Excavation: Dig a trench roughly 8” deep and 12” wide. Firely compact until bottom is fairly level. Add 6” of 3/4” clean gravel and compact again.

**Step 2** Leveling Course: Add 1” of course 0.33 sand into bottom of trench.

**Step 3** First Course: Place Cambridge wall units in trench touching each other (textured face outward on single-face units). Keep all units level in all directions. For straight walls, also use a string line.

**Step 4** Additional Courses: Stack staggered wall units on top, stepping each new row back approximately 5”. In this type of gravity wall installation, weight and set back of the units provide resistance. Backfill with 3/4” clean gravel fill and compact as each course is completed. To prevent any run off or soil passing through the system, a landscaping fabric can be placed behind the wall units. Add cap units if desired.

This is the basic recommended procedure for straight, circular and serpentine retaining walls up to 20” high. For higher walls, contact your Authorized Cambridge Distributor for advice. Installation guidelines must follow those as instructed by the Interlocking Concrete Pavement Institute (ICPI).

**FOR MORE DETAILED INSTRUCTIONS, VISIT THE CAMBRIDGE DISTRIBUTOR OR CALL THE CUSTOMER SERVICE CENTER INSTALLATION INSTRUCTIONS ON WWW.CAMBRIDGEPACERS.COM.** Installation guidelines must follow those as instructed by the Interlocking Concrete Pavement Institute (ICPI).

**IMPORTANT NOTICE:** All products are manufactured as per specifications against surface cutting on all Cambridge textured products.
FREQUENTLY ASKED QUESTIONS

CAN PAVINGSTONES BE SEALED, AND IF SO ARE THERE ANY SPECIFIC GUIDELINES?
Alliance Gator, our supplier of sealers and cleaners, recommends waiting 1 year before sealing, since the efflorescence bleeding process is unpredictable. Before sealing any surface one must ensure that there is no efflorescence in the pavers. Efflorescence is a natural process. It is a condition which occurs in all cement based products, as well as in many other paving products. The condition will usually correct itself with time and exposure to the elements. Sealing is a personal choice based on aesthetic preferences, but is not necessary. Prior to sealing, the pavers must be cleaned with an efflorescence cleaner.

DO YOU HAVE ANY TIPS ON REMOVING COMMON STAINS FROM CONCRETE PAVINGSTONES?
All pavements will stain, but when properly installed, interlocking concrete pavements have very low maintenance and will provide an attractive surface for decades. Under foot and vehicular traffic, they can become exposed to dirt, stains and wear. This is common to all pavements. The below tips address various steps to ensure the durability of interlocking concrete pavements.

Remember, one of the main advantages of concrete pavers versus asphalt or concrete is if a stain cannot be removed - the PAVER CAN!

We received these recommendations from Alliance Gator, as well as from contractors. Cambridge Pavers, Inc. does not warranty or guarantee these cleaning methods will work and does not assume any responsibility for the actions of those attempting to clean. Prior to applying the suggested cleaning agent to a large area, test on one or two pavers to make sure you are satisfied with the results. If you can, please choose a paver in an area not easily seen.

Asphalt and emulsified asphalt - Use Alliance Rubber, Paint and Tar Remover. Follow the directions and reaply if necessary. You can also try the following: chill with ice (if warm outside) and scrape away the excess with a hard plastic scraper. Apply Alliance XP Oil and Grease remover and follow directions on the container.

Cutback asphalt & roofing tar - Use Alliance Rubber, Paint and Tar Remover and follow the directions.

Blood, candy, ketchup, mustard and grease drippings from food - Use liquid dish soap and let penetrate 20-30 minutes. Scrub and rinse with hot water. You may also use Oxyclean mixed 4 scoops to a gallon of hot water. Let soak for 15 minutes, scrub with a nylon bristle brush, and rinse.

Caulking - Scrape off excess and scrub with a poultice of denatured alcohol and rinse with hot water and liquid dish soap.

Acrylic latex caulk - Use Alliance Rubber, Paint and Tar Remover or Alliance Eco Soy Stripper and follow guidelines for removal of dried paint.

Chewing gum - Same as caulking.

Clay Soil - Scrape off dry material. Scrub and rinse with hot water mixed with Alliance Shampoo.

Creosote - Apply a poultice with paint thinner and talc. Scrub and allow to dry. Scraper off and scrub with scouring powder and rinse with water.

Efflorescence - Use Alliance Efflorescence Remover. Dilute according to instructions on container. Apply and rinse with water.

Leaf stains - Use Clorox Pro Results Outdoor Bleach and follow the instructions for application. Of course be sure to test one paver at a time. The cause of this problem is leaves which fall annually. This will continue to happen so a decision has to be made whether to live with or remove the tree.

Wood rot, mulch or tobacco stains - Use Oxyclean 4 scoops to a gallon of hot water. Apply and let soak for 15 minutes. Scrub with a nylon bristle brush and rinse with water. You may also use Pool Shock. Wet the entire surface to be cleaned then mix 1/2 lb of pool shock with 4 gallons of water. Scrub, apply, and rinse off.

Mold and mildew - Use Oxyclean or pool shock (follow same directions as above).

Mortar - Extremely difficult to remove. If mortar is fresh and not hardened, try Alliance Efflorescence Remover. Scrub and rinse with water. Reapply if necessary. It may be necessary to replace the paver.

Oil or grease that has penetrated - Soak up excess with rags and apply Alliance XP Oil & Grease Remover. Leave on for 6-8 hours till it dries to a powder and sweep off. Also works on antifreeze, brake fluid, hydraulic oil and citronella wax.

Paint - Fresh paint should be mopped up immediately with rags or paper towels by blotting. Do not wipe as this will spread the stain. Soak and then scrub the area with hot water, scouring powder and a stiff brush until no more improvement is seen. Let the remaining paint dry and remove as described below.

Dried paint - Scrape any excess oil based paint, varnish or water based latex paint off the surface. Use Alliance Rubber, Paint and Tar Remover or Alliance Eco Soy Stripper and follow the directions on the container. Another option is to purchase a commercial paint remover and follow the directions. Loosen with gentle scrubbing. Do not rub the loosened paint into the surface of the paver. Instead, blot up the loosened paint and thinner. Repeat as necessary. Note: latex paints once dried are more difficult to remove.

Soot from smoke - Use a solution of trisodium phosphate (TSP) diluted to directions on container. Scrub and rinse with water.

Tire skid marks - Use Alliance Rubber, Paint and Tar Remover or scrub the black area with water, detergent and scouring powder. In the case of small stained areas, removal and replacement of marred pavers may be an easier option.

Rust - Define the source of the rust stain (e.g.: sprinklers, patio furniture, fertilizers) and eliminate it to prevent recurrences. Apply Alliance Rust Remover and scrub with a stiff bristle brush. Multiple applications may be necessary. Follow directions accordingly. Test a small area of pavers first. Note: Rust Remover will damage a sealer.

CAN PAVINGSTONES BE INSTALLED ON A CONCRETE BASE?
As long as the ICPI Construction details are followed.

CAN PAVINGSTONES BE INSTALLED ANYWHERE INSTEAD OF ASPHALT OR POURED CONCRETE?
Yes. Choose Cambridge Pavingstones with value-added ArmorTec for any paving project. An interlocking Cambridge Pavingstones system will instantly improve your home’s appearance and increase its appraised value. With dozens of shapes and colors to choose from, design possibilities for driveways, walkways, patios & pools, sunrooms and other areas are endless.

HOW DO CAMBRIDGE PAVINGSTONES HOLD UP COMPARED TO ASPHALT AND POURED CONCRETE?
Cambridge Pavers are more durable. Interlocking pavers are an engineered pavement system and are used at airports, taxiways, container ports, industrial and corporate campuses as well as on streets for urban renewal projects.

WHAT MAKES PAVINGSTONES SO STRONG?
They are made of high-density concrete. Cambridge Pavingstones are twice as strong as and less absorbent than poured concrete. The mortarless, flexible, interlocking system won’t crack or heave as a result of ground movement. Ugly patches are a thing of the past.

CAN ARMORTEC® COME OFF?
No. ArmorTec® and the paver are, in fact, one. ArmorTec®, also referred to as “hardfacing,” has been field-proven for over 70 years in Europe, where pavingstone technology originated and continues to evolve.

CAN PAVINGSTONES BE INSTALLED OVER EXISTING PAVEMENT?
Yes. Cambridge Pavingstones can be used as an overlay over existing concrete patios and walkways as well as asphalt driveways. Costs incurred for removal and disposal of existing asphalt or concrete are therefore eliminated. Follow ICPI guidelines.

ARE PAVINGSTONES SLIPPERY?
No. Pavingstones surpass the standards for slip-resistance set by the Americans With Disabilities Act.

CAN PAVERS BE PLOWED?
All pavements can be damaged by steel plow blades. ICPI recommends using a rubber-edged plow blade.

CAN DE-ICING CHEMICALS BE USED ON PAVERS?
We recommend using sand as the preferred method for providing skid and slip resistance. If using de-icer we recommend only sodium chloride (NaCl). De-icer should be applied sparingly. Once loosened, snow and ice should be promptly removed to avoid a build-up in the concentration of the de-icing chemical. Do not use products that contain a blend of chemicals.
Congratulations! You have recently improved your property with strong, colorful and attractive Cambridge pavingstones. As a proud owner, you have invested in a long-lasting, durable, yet flexible pavement that adds value to your real estate. A truly beautiful yet practical pavement graces your property. If your project is just about to begin, you can anticipate enhancing your property with the best paving system for your money.

WHAT IS EFFLORESCENCE?
There is a chance that after a few weeks or months pass, a white haze may appear on the surface of the pavers. This is known as efflorescence. It may appear randomly or in certain areas, and will be more pronounced on dark colored pavers. The white haze may give the impression that the color of the pavers is fading. When wet, the white disappears and the color of the pavers is enhanced. When they dry, the white haze reappears.

EFFLORESCENCE IS COMPLETELY NATURAL AND WILL DISAPPEAR WITH TIME
There is no reason to be concerned that your pavers are damaged or defective. The concrete pavers are going through a natural process. It is a condition that occurs in all cement-based products, as well as in many other paving products. The condition will usually correct itself with time and exposure to the elements.

WHEN WILL EFFLORESCENCE STOP?
When the supply of calcium hydroxide is exhausted. If you live in an area of frequent rain and sunny days, efflorescence and its passing may occur quickly. The process may take much longer in drier climates.

WILL IT GO AWAY NATURALLY?
Since many factors are involved in its formation, it is difficult to determine when efflorescence will stop. Just as it appears naturally, efflorescence will eventually disappear. Over time, rainwater can wash and wear it away. In urban areas with acidic rainfall, efflorescence may go away faster than in rural areas.

CAN IT BE REMOVED WITHOUT THE WAIT??
Yes, efflorescence may be cleaned with commerically available cleaners formulated specifically for concrete pavers. Cleaning should be performed immediately after efflorescence has appeared. It may reappear as long as the chemical reaction continues and cleaning may need to be done until efflorescence has stopped.

Most cleaners contain acid and detergents, so be sure to follow all label directions and environmental regulations. Careless or improper cleaning can result in injury, damage, and discoloration to the surface of the concrete pavers. Always conduct a test in a small, inconspicuous area before applying any cleaner to the entire area of concrete pavers. After cleaning, the pavers should be completely dry and free from efflorescence prior to applying any sealers.

THE CHEMISTRY OF EFFLORESCENCE
All concrete products contain cement which produces lime or water soluble calcium oxide. Lime can also be in the bedding sand, aggregate base materials, or soil. Although concrete pavers are solid, strong, and very dense, they contain millions of microscopic capillaries that run from the interior to the surface. Moisture from rain, sprinkler systems, underground sources, poor site drainage, or dew enters these microscopic capillaries. Calcium oxide inside the paver reacts with the water in the capillaries and forms calcium hydroxide. This rises to the surface, reacts with the carbon dioxide in the air, and forms a white haze of calcium carbonate. When moisture on the surface evaporates, the white haze of efflorescence becomes visible.

ELIMINATING EFFLORESCENCE
Most producers of pavers put chemical additives in the concrete to reduce the likelihood of efflorescence. Completely eliminating the chance of efflorescence, however, isn’t possible because it’s a natural byproduct of hardened concrete. It will stop when no more calcium hydroxide is available to move to the surface. There are cleaners available that can remove efflorescence. These will enhance the natural beauty of your concrete paver project. Consult your paver supplier to find an appropriate cleaner.

POLYMERIC HAZE
Polymeric haze from the use of polymeric joint sand may appear on your concrete products if the sand was not removed from the surface of the paver properly. This does not affect the integrity of the product or your installation. The hazing will weather away naturally with time and rain or it can be removed with a specialized cleaner. You are advised to contact your contractor. Cambridge Pavers, Inc. accepts no responsibility or liability for this occurrence.

**INDEX**
We are changing America’s Landscape with Pavingstones and Wallstones!
We want towns all over the United States to upgrade their sidewalks, downtown areas and municipalities with products that will outperform concrete and asphalt. We are allowing people to extend their living space beyond their four walls so that they can enjoy time with family and friends throughout the year. This is about something larger than a pretty driveway or patio. It is about an investment that makes people feel good about coming home or taking a walk in their local community. Our mission is to encourage positive change in the environments we utilize each and every day. We are proud to be a part of this change, one paver and one wallstone at a time.

Made in AMERICA
See “Before & After” photo images of your project with the Cambridge DesignScape Visualizer™

Simply bring digital photos of your yard or existing driveway to an Authorized Cambridge Distributor or professional contractor and they will create realistic, computer-generated designs right before your eyes. You can also visit cambridgepavers.com and create images yourself. Preview the area illustrating your new patio, pool deck, walkway or driveway with any Cambridge Pavingstones, Wall System and outdoor living pre-packaged kit in actual colors, textures and patterns of your choice.

As an added service, we can make available an affordable design package including a 3D virtual tour and color blueprints created for you by an experienced design professional! At Cambridge, every project is important to us because it involves you, your home and your desire to improve the quality of your outdoor lifestyle. We are always grateful to be a small but important part of your plans.
